

04. Fundamentos de Firebase y PWA en Ionic

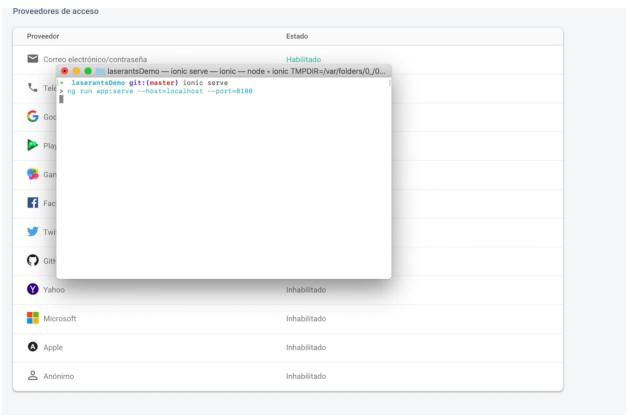

Start an App

Create an lonic app using one of the pre-made app templates, or a blank one to start fresh. The three most common starters are the blank starter, tabs starter, and sidemenu starter. Get started with the ionic start command:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL

→ laserantsDemo git:(master) ionic g page registro

> ng generate page registro --project=app

CREATE src/app/registro/registro.module.ts (355 bytes)

CREATE src/app/registro/registro.page.scss (0 bytes)

CREATE src/app/registro/registro.page.scss (0 bytes)

CREATE src/app/registro/registro.page.html (127 bytes)

CREATE src/app/registro/registro.page.spec.ts (661 bytes)

CREATE src/app/registro/registro.page.ts (264 bytes)

UPDATE src/app/app-routing.module.ts (594 bytes)

[OK] Generated page!

→ laserantsDemo git:(master) x ionic g page
```

```
→ laserantsDemo git:(master) x ionic g page login
> ng generate page login —project=app
CREATE src/app/login/login-routing.module.ts (343 bytes)
CREATE src/app/login/login.module.ts (465 bytes)
CREATE src/app/login/login.page.scss (0 bytes)
CREATE src/app/login/login.page.html (124 bytes)
CREATE src/app/login/login.page.spec.ts (640 bytes)
CREATE src/app/login/login.page.ts (252 bytes)
UPDATE src/app/app-routing.module.ts (707 bytes)
```
